French	B1

TECHNICAL SKILLS

Automation and control
Control logic, sequencing, sensors, actuators, and basic automated processes.

Programming
Python fundamentals, algorithmic thinking, and introductory PLC programming.

Robotics
EV3 sensors and motors, conditions, loops, and sequential logic.

Electrical engineering
Basic circuits, voltage, current, resistance, and practical measurements.

System integration
Connecting inputs, outputs, sensors, actuators, and control logic.

Troubleshooting
Structured observation, testing, basic fault isolation, and iterative refinement.

PROFESSIONAL PROFILE

Automation Engineering student developing practical skills in automation, programming, robotics, and electrical systems. Coursework and laboratory projects have built a foundation in control logic, sensors and actuators, sequential programming, and structured troubleshooting. Brings a methodical, curious approach and a strong interest in turning technical concepts into reliable system behaviour.

ACADEMIC EXPERIENCE

Automation Engineering Studies

Coursework and laboratory practice

Academic learning in automation, robotics, programming, and electrical engineering through coursework, guided laboratory exercises, and technical projects.

SELECTED PROJECTS

EV3 Robotics and Control

Applied sensors, motors, conditions, and loops in robotics tasks to create repeatable movement and control sequences.

Logic and Automation

Practised basic control logic, input-output relationships, and step-by-step system behaviour through guided technical exercises.

Python Foundations

Developed programming fundamentals through algorithmic thinking, conditional logic, and introductory problem-solving exercises.

WORKING APPROACH

Observe carefully, test methodically, isolate issues, and refine solutions. Comfortable learning through practical experimentation and clear technical communication.
